

TO: Project Record

OPR: SendCUIEmail Project

Replace `README.md` with `Decrypt_Instructions.html` for recipient decryption instructions.

Recipients receiving encrypted CUI files need clear instructions to decrypt them. The current README.md file:

3. Options Evaluated

Option	Size	Pros	Cons
README.md (current)	~2 KB	Simple, tech-friendly	Ugly in Notepad, requires markdown viewer
HTML (selected)	~5-10 KB	Universal browser support, styled, professional	Some orgs may block HTML attachments
PDF	~50-100 KB	Professional, prints well	Large file size, requires PDF reader
HTML + PDF	~60-110 KB	Maximum compatibility	Redundant, large

4. Rationale

- a. **Universal access:** Every Windows user has a browser (Edge is built-in)

- b. **Professional appearance:** Styled with CUI banner, color-coded steps
- c. **Copy-paste friendly:** One-liner in monospace code box, easy to select
- d. **Small footprint:** ~5-10 KB with inline CSS
- e. **Self-contained:** No external dependencies, works offline
- f. **Fallback:** Password_Email includes the one-liner if HTML is blocked

5. Implementation

- Generate `Decrypt_Instructions.html` instead of `README.md`
- Include inline CSS (no external stylesheets)
- Match `QuickStart_Guide.pdf` visual style (CUI yellow banner, blue steps)
- Include file picker one-liner in copy-friendly format
- Update `CUI_Email.msg` to reference HTML file instead of `README.md`
- Add “Before You Start” FAQ section to anticipate recipient questions

6. File Size Target

- Maximum: 15 KB (including all inline CSS)
- Expected: 5-10 KB

7. Compatibility

- **Windows:** Edge, Chrome, Firefox (all built-in or common)
- **macOS:** Safari, Chrome, Firefox
- **Mobile:** Standard mobile browsers
- **Offline:** Works without internet (inline CSS)
